

Mechanical Sewing Machine for Garments and Shoes

This mechanical sewing machine is designed for producing garments, shoes, and accessories. It features a robust metal construction with a handwheel for manual operation, ensuring precision and durability.

Product Overview

Robust Mechanical Sewing Solution

This mechanical sewing machine is engineered for precision in garment, shoe, and accessory production. Built with a robust metal construction, it provides the durability required for both industrial and home sewing environments. The manual handwheel operation combined with a reliable needle and feed mechanism ensures consistent stitch quality across various fabric types.

Technical Specifications

Construction Material	Robust Metal
Operation Method	Manual Handwheel

Application

Suitable Applications	Garment Production, Shoe Manufacturing, Accessory Production, Industrial Use, Home Use
-----------------------	----------------------------------------------------------------------------------------

Key Features

Machine Capabilities

- Manual handwheel for precise control
- Durable metal frame construction
- Integrated needle and feed mechanism
- Versatile fabric compatibility
