

Medical Glove Inner Wrapping Machine

This machine automates the inner wrapping of medical gloves using computer-controlled operation. It integrates automatic feeding, wrapping, sealing, and output functions for enhanced production efficiency.

Product Overview

Automated Surgical Glove Wrapping

The YZT-200N is a specialized high-performance device engineered for the automated inner wrapping of surgical gloves. It integrates an industrial computer control system with high-precision servo motors to ensure consistent folding, gusseting, and sealing. Designed for efficiency and hygiene, this machine streamlines the packaging process while maintaining strict production standards.

Technical Specifications

Production Speed

25 wallets/min

Processing Speed

| | |
|-------------------------|-----------|
| Total Power Consumption | 4.6 KW |
| Raw Paper Width | 380-460mm |
| Max Roll Diameter | 600 mm |
| Max Roll Weight | 120 kg |

Finished Product Dimensions

Finished Package Size Specifications

| Parameter | Range |
|-------------------------|-------------|
| Minimum Size | 90 x 180mm |
| Maximum Size | 110 x 210mm |
| Standard Package Width | 95-110mm |
| Standard Package Length | 180-205mm |

Physical Dimensions

| | |
|----------------------------|----------------------|
| Overall Machine Dimensions | 3040 x 2680 x 1800mm |
|----------------------------|----------------------|

Key Features

Operational Capabilities

- Industrial computer control system
- Fixed length positioning
- Photocell tracking
- Imported high-precision servo motor
- Automated glove feeding, folding, and gusseting
