

Medical Waste Incineration System

This high-efficiency system is designed for the safe and environmentally responsible disposal of biomedical waste. It features multi-stage combustion chambers and advanced air pollution control systems, suitable for hospitals, research facilities, and waste management companies.

Overview

Professional Medical Waste Incineration System

This high-efficiency incineration system is engineered for the safe and environmentally responsible disposal of biomedical waste. It features multi-stage combustion chambers and advanced air pollution control systems (APCS), including scrubbers and filters, to ensure complete pathogen destruction. Designed for hospitals, research facilities, and waste management companies, it meets stringent emission standards while offering automated waste handling for operational reliability.

Technical Capabilities

Combustion Technology	Multi-stage combustion chambers
Air Pollution Control	Advanced APCS, Scrubbers, Filters
Automation	Yes

Compliance & Safety

Suitable For

- Hospitals
- Research Facilities
- Waste Management Companies

Compliance

Stringent Emission Standards • Pathogen Destruction
