

Medium and Low Voltage Power Distribution Equipment

This equipment is designed for medium and low voltage power distribution. It is suitable for use in power engineering projects.

Overview

Comprehensive Power Distribution Solutions

This range of medium and low voltage power distribution equipment is engineered to meet the rigorous demands of modern electrical infrastructure. The collection includes advanced transformers, circuit breakers, and comprehensive switchgear systems designed for high performance and reliability. These components are essential for supporting power transmission and distribution across critical industrial sectors including rail, metallurgy, chemical engineering, and mining.

Product Range

Medium Voltage Equipment

- Epoxy resin pouring transformers
- Hermetically sealed transformers
- Vacuum circuit breakers
- Switchgear cabinets
- Gas-insulated switchgear cabinets (C-GIS)
- Fuses

Low Voltage Equipment

- 400V intelligent air-breakers
- Molded case circuit breakers
- Contactors
- Thermo-relays
- Control switches for electric motors
- Leakage switches
- MCB
- Fuse protectors

Applications

System Capabilities

Transformer substations • Power transmission lines

Supported Industries

Electric Power, Railroad, Metallurgy, Chemical Engineering, Coal Mining
