

Mesh Satellite Dish Antenna

This satellite dish antenna features a mesh design for signal transmission and reception. It is suitable for professional satellite communication applications.

Product Overview

Professional Communication Solution

This large-scale mesh satellite dish is engineered for high-performance signal reception and transmission in professional environments. Its parabolic design features a precision-engineered mesh surface supported by a robust network of radial and concentric struts to ensure signal integrity. Equipped with an integrated LNB, this system provides a reliable solution for complex satellite communication applications.

Technical Specifications

Key Components

- Parabolic reflector surface
- Radial and concentric support struts
- Central feed horn (LNB)
- Heavy-duty adjustable pedestal

Construction Material

Fine mesh parabolic reflector

Installation and Compatibility

Mounting Configuration

Heavy-duty adjustable pedestal for precise aiming and alignment

Application

Primary Applications

Satellite Communication, Signal Transmission, Signal Reception
