

Metal Billet Sawing Machine

This sawing machine is designed for cutting large metal billets and ingots. It features a robust conveyor system for material handling and a large saw blade for precise cuts.

Product Overview

Industrial Metal Billet Sawing

This heavy-duty sawing machine is engineered for the high-precision cutting of large metal billets and ingots. It features a robust conveyor system designed for efficient material handling in demanding industrial environments. The system utilizes a large-diameter saw blade to ensure accurate, consistent processing for high-volume metal production requirements.

Technical Specifications

Handling Features

- Robust conveyor system
- High-volume throughput capacity
- Large saw blade diameter

Primary Application

Metal Billet Cutting, Ingot Processing, Heavy-Duty Industrial
