

Metal Cast Housing

These metal cast housings are engineered to provide robust protection for internal components. They are suitable for use in industrial machinery and equipment requiring durable enclosures.

Product Overview

Precision Cast Housing Solutions

This metal cast housing is engineered for demanding industrial applications, including gearboxes and rotating machinery assemblies. Utilizing advanced foundry and machining processes, these components offer high durability and structural integrity. The design features precision-machined surfaces, integrated bolt holes for secure mounting, and internal configurations suitable for housing gears and bearings.

Technical Specifications

Manufacturing Capabilities

- Foundry Casting
- Precision Machining

Typical Applications

Gearbox Assembly • Industrial Machinery • Rotating Equipment • Mechanical Housings

Material Composition

Cast Iron, Cast Steel

Design Features

Key Design Features

Feature	Benefit
Machined Surfaces	Ensures precise fit and alignment
Flanged Bases	Provides secure mounting points
Bearing Races	Supports smooth mechanical operation
