

Metal Casting and Forging Machine

This high-performance machinery is designed for precision metal forming. It features a multi-stage processing system with feeding, shaping, and ejection mechanisms, along with advanced control panels.

Overview

High-Performance Metal Processing

This metal casting and forging machine is engineered for high-precision metal forming in demanding industrial environments. It features a sophisticated multi-stage processing system that seamlessly integrates feeding, shaping, and ejection mechanisms. With its advanced control panel, operators can achieve precise monitoring and consistent performance, making it a reliable solution for heavy-duty manufacturing needs.

Technical Specifications

Processing Stages

- Feeding
- Shaping
- Ejection

Construction

Durable Materials • Industrial Grade • Heavy Duty

Control System

Advanced digital control panel for precise operation and monitoring
