

Metal Castings for Industrial Machinery

These metal castings are suitable for use in machinery and industrial applications. The castings are available in chilled iron, wear-resistant iron, aluminum, brass, and bronze.

8. Chilled Iron & Wear-Resistant Iron Castings, like wheels, linings, etc.
such as pistons, linings, etc., with material of Aluminum, brass, bronze, up to 40kg.
9. Non-ferrous Metal Casting.

Product Overview

Industrial-Grade Metal Castings

These high-performance metal castings are engineered for demanding industrial machinery applications, particularly within the apparel and textile sectors. The range includes both durable chilled iron components and versatile non-ferrous options. Designed for reliability, these parts provide essential functionality for heavy-duty equipment.

Material Specifications

Available Materials	Chilled Iron, Wear-Resistant Iron, Aluminum, Brass, Bronze
Weight Limit	40 kg

Component Applications

Typical Components

- Wheels
- Linings
- Pistons

Industry Suitability

Apparel Machinery • Textile Machinery • General Industrial
