

# Metal Cold Rolling Mill

This cold rolling mill is designed for shaping metal. It features robust construction, multiple rolling stands, and control panels for industrial metalworking.

## Overview

### Industrial Metal Cold Rolling Mill

This heavy-duty cold rolling mill is engineered for precision metal shaping in demanding industrial environments. Featuring a robust construction with multiple rolling stands and integrated hydraulic systems, it ensures consistent performance and structural integrity. The unit is equipped with advanced control panels and safety railings, making it an ideal solution for high-volume metalworking applications requiring reliability and control.

## Technical Specifications

### Key Equipment Features

- Multiple rolling stands configuration
- Integrated hydraulic drive system
- Overhead ductwork for ventilation
- Advanced control panel interface
- Safety railing system

### Construction

Robust Steel Frame • Industrial Grade

### Application

Industrial Metalworking, Cold Rolling, Heavy-Duty Manufacturing
