

Metal Cutting and Bending Machine

This machine is designed for cutting and bending metal sheets. It facilitates precise and efficient processing for various industrial applications.

Overview

Industrial Metal Cutting Solutions

These professional-grade air plasma cutting machines are engineered for precision and durability in demanding metalworking environments. Featuring advanced IGBT technology, the units offer robust cutting capabilities with intuitive control panels for easy operation. Designed for portability and consistent performance, they are essential tools for high-efficiency metal fabrication tasks.

Technical Specifications

Available Models

- LGK-100IGBT
- LGK-200IGBT

Performance Metrics

100 A

Model 100 Capacity

200 A

Model 200 Capacity

Technology

Invert Air Plasma Cutting

Design & Build

Control Interface

Digital Display • Adjustment Knobs

Cooling Design

Ventilation slots, Efficient airflow

Portability Features

Yes
