

Metal Cutting and Folding Machine

This cutting and folding machine is designed for precision metal forming. Its robust frame ensures stability during operation, while the open-top design allows for easy material loading and unloading.

Overview

Precision Metal Forming Solution

This cutting and fold-bend machine is engineered for high-precision metal fabrication tasks. Featuring a robust, stable frame and an open-top design, it facilitates efficient material handling and consistent, repeatable results. Equipped with an integrated control panel, it allows for precise parameter adjustments to meet demanding production standards.

Design & Build

Frame Construction	Robust heavy-duty frame
Material Loading	Open-top design
Cooling System	Yes

Control & Operation

Control Method	Integrated control panel
Key Capabilities	Parameter Adjustment, Performance Monitoring, Precision Forming

Applications

Primary Applications

- Metal cutting
- Metal folding
- Metal bending
- General metal fabrication
