

Metal Cutting and Folding Machine

This high-precision machine is engineered for cutting and folding metal sheets. It features an advanced control system and multiple bending capabilities to handle diverse materials and thicknesses.

Overview

High-Precision Metal Processing Solution

This versatile metal cutting and folding machine is engineered for high-precision forming applications across industrial manufacturing, automotive, and construction sectors. Featuring a robust construction paired with an advanced control system, it delivers accurate and repeatable results on various materials and thicknesses. The user-friendly interface ensures efficient programming and operation, significantly enhancing workflow productivity for professional metalworking environments.
