

Metal Cutting and Folding Machine

This cutting and folding machine efficiently forms metal by combining cutting and bending in one unit. Its robust design ensures precise cuts and bends on various metal types, optimizing productivity and minimizing material waste.

Overview

Versatile Metal Forming Solution

This cutting and fold-bend machine is engineered for efficient metal forming, combining two essential manufacturing processes into a single, streamlined unit. Featuring robust construction, it ensures durability and precision for consistent, high-quality results across various metal types and thicknesses. Designed to enhance productivity and minimize material waste, this system is an ideal choice for small to medium-sized production environments.

Technical Capabilities

Adjustability

- Adjustable cutting angles
- Adjustable bending angles

Primary Functions

Metal Cutting, Metal Bending, Metal Folding

Control System

Programmable controls for automated operation

Safety & Compliance

Safety Features

Operator Protection • Safety Interlocks
