

Metal Cutting and Folding Machine

This machine combines metal cutting and bending capabilities into a single unit. It is designed for precision metal forming, enhancing efficiency and reducing material handling.

Overview

Precision Metal Fabrication

This cutting and fold-bend machine is engineered for precision metal forming, combining essential cutting and bending capabilities into a single, efficient unit. By integrating these functions, the machine significantly enhances workflow efficiency and reduces the need for manual material handling. Its robust construction ensures durability and stability, making it a reliable choice for high-quality metal fabrication tasks.

Technical Features

Design Advantages

- Integrated cutting and bending design
- Space-saving footprint
- Robust, durable construction
- High operational stability

Capabilities

Metal Cutting, Metal Folding, Metal Bending, Precision Forming

Applications

Primary Applications

Metal Fabrication • Shearing Operations • Sheet Metal Forming
