

Metal Cutting and Folding Machine

This cutting and folding machine combines cutting and bending operations. Its robust design ensures accuracy when processing various metal types and thicknesses.

Overview

Precision Metal Fabrication Solution

This metal cutting and folding machine is engineered for high-precision metal forming, combining two essential operations into a single, streamlined unit. Featuring a robust frame for maximum stability and durability, it ensures accurate and repeatable results across various metal types and thicknesses. The integrated control system allows for intuitive programming and parameter adjustment, significantly enhancing productivity while minimizing material waste.

Key Features

Design Highlights

- Integrated cutting and bending operations
- Robust frame construction for stability
- High-precision bending system
- User-friendly control interface

Core Capabilities

Metal Cutting, Metal Bending, Precision Forming, Programmable Control

Performance Metrics

Efficiency Metrics

1 Unit

Combined Operations

Application

Suitable Applications

Metal Fabrication • Sheet Metal Processing • Precision Manufacturing
