

Metal Cutting and Folding Machine

This precision cutting and folding machine is designed for metal forming applications. The shearing machine offers advanced control systems and robust construction for accurate and efficient material processing.

Overview

Precision Metal Forming Solution

This precision cutting and fold-bend machine is engineered for high-performance metal forming applications. It features advanced control systems and robust construction to ensure accurate and efficient material processing across various metal types and thicknesses. Designed for modern manufacturing environments, the machine integrates user-friendly interfaces with automated functions and comprehensive safety mechanisms for optimal operation.

Capabilities

Processing Types

Metal Cutting, Metal Folding, Metal Bending, Material Forming

Features

Key Features

- Advanced control systems
- Robust industrial construction
- User-friendly interface
- Automated processing functions
- Integrated safety mechanisms
