

# Metal Cutting and Folding Machine

This heavy-duty machine is designed for cutting and folding metal materials. It features a vertical structure with a movable cutting and bending head, suitable for various metalworking applications.

## Product Overview

### Heavy-Duty Metal Forming Solution

This robust metal cutting and folding machine is engineered for demanding industrial metalworking and fabrication applications. Featuring a durable vertical structure, it utilizes a precision cutting and bending head mounted on a movable arm for enhanced operational flexibility. The unit is equipped with a dedicated control cabinet for precise management of forming processes and sits on a sturdy base to ensure maximum stability during high-load operations.

## Technical Specifications

### Machine Type

Cutting • Folding • Bending

### Construction

Vertical structure with movable arm

### Stability Features

Sturdy Base, Industrial Grade

## Operational Controls

### Control System

Integrated control cabinet with multi-element interface
