

Metal Cutting and Folding Machine

This high-performance machine is designed for precision metal forming. Its robust construction ensures durability and stability during operation.

Overview

Precision Metal Forming Solution

This high-performance machine is engineered for precision metal cutting, shearing, and bending tasks. Built with robust construction for maximum durability and stability, it ensures consistent results in demanding metalworking environments. The system features a powerful motor and a high-speed cutting wheel to optimize material processing efficiency.

Performance Features

Precision Control Systems

- Adjustable fence for accurate positioning
- Integrated clamping system for repeatable cuts

Core Capabilities

Metal Cutting, Shearing, Bending, Folding

Construction

Construction Quality

Robust Design • High Stability

Technical Specifications

Drive System

High-performance electric motor

Cutting Mechanism

High-speed cutting wheel
