

Metal Cutting and Folding Machine

This cutting and folding machine is designed for precision metal forming. It features a robust construction with a combination of cutting and bending capabilities.

Overview

Precision Metal Forming Solution

This metal cutting and folding machine is engineered for high-precision metal forming tasks. It integrates robust construction with versatile cutting and bending capabilities to ensure accurate and repeatable results. Equipped with safety features and an intuitive control panel, it is designed for efficient operation in various professional metalworking applications.

Capabilities

Operational Highlights

- Robust construction
- Integrated safety features
- Intuitive control panel
- High repeatability

Primary Functions

Metal Cutting, Metal Bending, Metal Folding
