

Metal Cutting and Folding Machine

This machine is designed for precision metal forming, integrating cutting and bending operations. Its robust frame ensures stability, while the hydraulic system provides power for processing various metal thicknesses.

Overview

Precision Metal Forming Solution

This metal cutting and folding machine is engineered for high-efficiency precision forming, combining both cutting and bending operations into a single, streamlined process. Built with a robust frame for maximum stability, it ensures consistent, accurate results across various metal thicknesses. The integrated hydraulic system delivers reliable power, while the intuitive control panel allows for seamless programming and adjustment, making it an essential tool for manufacturing, construction, and automotive applications.

Technical Specifications

Capabilities	Metal Cutting, Metal Bending, Hydraulic Operation
System Type	Hydraulic

Safety & Control

Safety Features

- Emergency stop buttons
- Protective guards

Control System	Programmable control panel
----------------	----------------------------

Applications

Suitable Industries

Manufacturing • Construction • Automotive
