

Metal Cutting and Folding Machine

This cutting and folding machine is engineered for precise metal forming. It integrates dual workstations to perform simultaneous cutting and bending processes, which maximizes efficiency and throughput.

Overview

Precision Metal Forming Solution

This metal cutting and folding machine is engineered for high-precision forming tasks in industrial environments. Featuring dual workstations, it allows for simultaneous cutting and bending operations to significantly increase throughput and operational efficiency. Built with robust, heavy-duty components and hydraulic cylinders, it delivers consistent, reliable performance while maintaining a compact footprint for optimized workshop space.

Technical Specifications

Safety Mechanisms

- Integrated safety guards
- Controlled hydraulic movement

Workstations	2 units
Operation Type	Hydraulic, Cutting, Bending

Operational Capabilities

Adjustable Parameters

Metal Thickness • Bend Angles

Control System	Separate control panel for parameter adjustment
----------------	---
