

Metal Cutting Machine Vertical Plug

This vertical plug is a component used in metal cutting machines. It features a robust construction with a metallic housing and a cylindrical motor section.

Product Overview

Industrial Vertical Plug Component

This vertical plug is a specialized component engineered for integration into metal cutting machines. Featuring a robust metallic housing and a dedicated cylindrical motor section, it ensures reliable performance in demanding industrial environments. The unit is designed for vertical orientation, incorporating a secure mounting flange and precision latching mechanisms for enhanced operational stability.

Technical Specifications

Key Features

- Robust metallic housing
- Integrated mounting flange
- Top-access cover with latching mechanisms
- Engineered for vertical machine integration

Classification

Series I

Mounting Configuration

Vertical orientation with mounting flange

Construction

Metallic housing, Cylindrical motor section
