

Metal End Fittings for Composite Suspension Insulators

These metal end fittings are used for composite suspension insulators. They provide a secure connection point for insulators in electrical transmission and distribution systems.

Product Overview

High-Performance Metal End Fittings

These metal end fittings are precision-engineered for use with composite suspension insulators in electrical transmission and distribution systems. Designed to provide a secure and reliable connection point, they are built to withstand significant mechanical stress and harsh environmental conditions. Their robust construction ensures the long-term integrity and operational performance of composite suspension insulator assemblies in critical infrastructure.

Technical Specifications

Primary Application	Composite Suspension Insulators
Function	Secure connection point for electrical transmission and distribution
Key Features	Mechanical Stress Resistant, Environmental Resistance, High Durability
