

Metal Fabrication Power and Control Unit

This heavy-duty metallic processing machinery is designed for industrial applications. The machine appears to be a power supply or control unit for a larger metalworking system, featuring multiple gauges, switches, and connection points.

Overview

Industrial Power and Control Unit

This heavy-duty power and control unit is engineered for demanding metal fabrication environments. Designed to integrate seamlessly with larger metalworking systems, it provides precise regulation and monitoring capabilities. Its robust construction ensures reliability during intensive industrial processing tasks.

Technical Specifications

Key Features

- Integrated analog gauges
- Heavy-duty industrial switches
- Multi-point connection interface
- Ruggedized housing

Model Identifier	ZKR 200
Application	Metal Fabrication, Industrial Processing, Power Control
