

Metal Forming Machine for Casting and Forging

This metal forming machine is designed for casting and forging processes. It features temperature control, timer settings, and gas operation indicators.

Product Overview

Precision Metal Forming Capability

This double-drawer metal forming machine is engineered for high-efficiency casting and forging applications. It features an integrated digital display and a comprehensive control panel, allowing operators to manage temperature, timing, and gas operation parameters with precision. Designed for professional metalworking environments, it provides reliable performance and consistent results for demanding industrial tasks.

Technical Specifications

Model Number	ZTD110B
Machine Type	Double-drawer metal forming machine
Primary Applications	Casting, Forging, Metalworking

Control & Operation

Control Features

- Digital display
- Temperature control
- Timer settings
- Gas operation indicators

Operating Value

58

Operational Parameter
