

Metal Forming Mould

This is a metal forming mould used in machinery and industrial processes. It features a central vertical post with a circular base constructed from coiled metal.

Product Overview

Precision Metal Forming Component

This high-quality metal forming mould is engineered for industrial manufacturing and material shaping applications. Featuring a robust central vertical post and a stable circular base, it provides the structural integrity required for consistent performance in demanding environments. The design includes a specialized coiled metal base with tripod stability, ensuring precision and reliability during the forming process.

Physical Characteristics

Base Configuration	Circular base with coiled metal construction
Stability Features	Three-point support, Rubber-capped feet, Anti-slip design

Technical Specifications

Component Type
Forming Mould • Industrial Machinery Component

Key Design Metrics

3 count
Support Feet

Material	Industrial-grade metal
