

Metal Forming Power Press

This power press is designed for a wide range of metal forming applications. It features a rigid frame, high-torque motor, and adjustable stroke length for efficient and controlled operation.

Product Overview

Versatile Metal Forming Power Press

This industrial power press features a robust, rigid frame construction designed for high stability and precision in metal forming tasks. It offers a user-friendly interface with simple operation and maintenance, supported by a reliable rigid rotating key type clutch. The machine is fully compatible with advanced automation systems including decoilers, straighteners, and feeders to streamline high-volume production workflows.

Technical Features

Supported Feed Equipment

- Decoiler
- Straightener
- Feeder

Process Applications

Punching, Blanking, Bending, Drawing

Safety and Compliance

Standard Safety Features

Emergency Stop • Safety Guards

Optional Protection (Model A)

- Dual hand operation protection
- Emergent braking device
- Photoelectric protection
