

Metal Forming Wheel

This durable metal forming wheel is designed for heavy-duty applications. It is constructed from high-strength steel, ensuring enhanced durability and long-lasting performance.

Product Overview

Robust Metal Forming Wheel

This durable and robust metallic wheel is precision-engineered for heavy-duty applications. Constructed from high-strength steel, it ensures long-lasting performance even in the most demanding industrial environments. The design features a multi-hole pattern that facilitates secure mounting and efficient load distribution, while its engineering focus provides optimal balance and reduced vibration during operation.

Technical Specifications

Material Construction	High-strength steel
Mounting Design	Multi-hole pattern, Secure mounting

Performance Metrics

Engineering Highlights

1 Efficient

Load Distribution

1 Optimized

Vibration Reduction

Application Suitability

Heavy-duty • Industrial • Demanding Environments
