

Metal Frame Assembly with Fasteners

This precision-engineered metal frame assembly provides structural support and stability. Constructed from lightweight, corrosion-resistant metal, it is fastened with nuts and bolts for durability in demanding environments.

Product Overview

Precision Metal Frame Assembly

This precision-engineered metal frame assembly features a robust, grid-like structure with integrated rectangular cutouts. Constructed from lightweight, corrosion-resistant metal, it is designed to provide exceptional structural support and stability for machinery and industrial applications. Secured with high-quality nuts and bolts, this assembly ensures long-lasting performance even in demanding operating environments.

Technical Specifications

Material Type	Lightweight Metal
Key Features	Corrosion-resistant, Structural Support, Precision-engineered, Grid Structure
Fastening Method	Nut and Bolt Assembly

Applications

Primary Applications

- Industrial Machinery Support
- Structural Frameworks
- Heavy-duty Equipment Assembly
