

Metal Frame Bending and Straightening Machine

This metal forming machine is designed for bending, folding, straightening, and leveling metal frames. It features a heavy-duty frame construction and multiple hydraulic cylinders for applying force.

Product Overview

Professional Metal Forming Solution

The QCWL Series Frame Bending and Straightening Machine is engineered for high-precision metal processing. Featuring a heavy-duty frame construction and a powerful hydraulic system, it excels at bending, folding, leveling, and straightening metal frames. Its intuitive control panel with integrated gauges ensures consistent, high-quality results for diverse industrial applications.

Operational Capabilities

Functions	Bending, Folding, Straightening, Leveling
-----------	---

Technical Specifications

Force Application

- Multiple hydraulic cylinders
- Dedicated hydraulic power unit

Frame Build	Heavy-duty steel construction
-------------	-------------------------------

Control and Monitoring

Control Panel Features

- Integrated pressure gauges
- Manual adjustment controls
- Process monitoring display
