

Metal Grinding Wheel Flange

This metal flange is designed for abrasive and grinding applications. Constructed from durable aluminum alloy, this flange provides a secure and stable connection for grinding wheels and abrasive tools.

Product Overview

Precision-Engineered Grinding Wheel Flange

This precision-machined metal flange is engineered specifically for abrasive and grinding applications, ensuring a secure and stable connection for your grinding wheels. Constructed from a durable aluminum alloy, it features a central raised hub with a smooth inner bore designed to minimize vibration during high-speed operation. The component is built for reliability and concentricity, making it an essential part for maintaining consistent performance in industrial grinding setups.

Technical Specifications

| | |
|------------------------|--------|
| Base Diameter | 150 mm |
| Hub Diameter | 75 mm |
| Overall Height | 80 mm |
| Mounting Hole Diameter | 10 mm |

Material & Construction

| | |
|--------------|---|
| Material | Aluminum Alloy |
| Key Features | Precision-machined, High-speed compatible, Vibration-resistant, Durable |
