

# Metal Machining Tool

This tool is used for precise material removal from metal workpieces. It is essential for shaping components in manufacturing and engineering applications.

## Product Overview

### Precision Metal Machining Capability

This heavy-duty metal machining tool is engineered for demanding industrial environments, providing robust performance for turning and milling operations. Designed for high-precision material removal, it supports large-scale cylindrical workpieces with stability and control. This equipment is an essential asset for manufacturing facilities requiring reliable, consistent machining results for complex metal components.

## Technical Specifications

### Primary Application

Heavy-duty • Precision Engineering • Industrial Manufacturing

### Machining Operation

Turning, Milling

### Workpiece Support

Horizontal

## Performance Metrics

### Key Performance Indicators

**1 High**

Material Removal Efficiency

**100 %**

Precision Rating
