

Metal Multi-Outlet Power Strip

This metal power strip provides multiple electrical outlets for powering various devices. It features a durable metal construction and is designed for reliable power distribution.

Overview

Professional Grade Power Distribution

This metal multi-outlet power strip is engineered for reliable power distribution in demanding environments such as data centers, server rooms, and industrial workspaces. Constructed with a durable metal housing, it ensures long-lasting performance and safety for connected equipment. Its design accommodates multiple electronic devices simultaneously, making it an essential component for efficient power management.
