

Metal Pipe Cutting and Bending Machine

This heavy-duty machine is designed for processing large metal pipes. It features a robust frame, automated pipe handling system, and precision cutting and bending capabilities.

Overview

Industrial Metal Pipe Processing

This heavy-duty cutting and fold-bend machine is engineered for the precise processing of large metal pipes. Featuring a robust frame and an automated handling system, it ensures efficiency in high-volume industrial environments. The integrated advanced control system allows for superior accuracy in both cutting and bending operations.

Operational Capabilities

Application Suitability

Heavy-duty Industrial • High-volume Production

Core Functions

Pipe Cutting, Pipe Bending, Pipe Folding, Automated Handling

Technical Features

System Highlights

- Robust structural frame
- Automated pipe handling system
- Advanced control system for precision
- Integrated cutting and bending modules
