

Metal Punching Press

This heavy-duty punching press is designed for metalworking applications, ensuring precise and efficient punching operations. It features a robust frame for stability and durability, along with a user-friendly control panel.

Product Overview

Industrial Metal Punching Press

This high-precision punching press is engineered for efficient sheet metal stamping, offering superior material savings and energy efficiency compared to traditional machining. Designed for heavy-duty industrial environments, it features a high-rigidity steel frame and heat-treated components to ensure stable, long-term performance. The machine supports advanced automation and safety protocols, making it an ideal solution for complex forming, blanking, and deep-drawing tasks across various manufacturing sectors.

Technical Performance

Slide Adjustment Precision	0.1 mm
Key Capabilities	Blanking, Punching, Forming, Deep Drawing, Trimming, Riveting, Extrusion

Safety and Design

Safety Equipment

- Double solenoid control valve
- Overload protection device
- Combined clutch/brake device
- Feeding error detection

Construction

Frame Construction	Heat-treated welded steel plate
