

# Metal Rod and Bar Bending Machine

This bending machine is designed for shaping metal bars and rods. It utilizes a three-roller system and adjustable guides to achieve accurate, consistent bends.

## Overview

### Professional Metal Bending Solution

This metal rod and bar bending machine is engineered for efficiency and ease of use, designed to streamline production processes. It is particularly well-suited for operations requiring the production of various ring sizes in smaller quantities. The system is built for autonomous operation, allowing for continuous production without constant manual oversight.

## Technical Specifications

### Operation Mode

Automated • Easy-to-operate

### Model Identifier

PX2000B

## Application

### Production Suitability

- Small quantity production
- Multi-size ring fabrication

### Primary Applications

Metal Rod Bending, Metal Bar Bending, Ring Production
