

Metal Rolling and Finishing Services

These services support customers in improving production quality and the environment. They also help reduce production costs through feasibility studies of investments for both new and revamping plants.

Product Overview

Industrial Metal Processing Solutions

These professional rolling and finishing services provide high-performance strip processing lines and cold rolling mills for a variety of metal types. With over 75 years of industrial experience, the offering includes comprehensive design, manufacturing, installation, and commissioning for carbon, silicon, stainless steel, and aluminum applications. The systems focus on high-quality automated processing, environmental sustainability, and precision control for both ferrous and nonferrous industries.

Capabilities

Rolling Mill Configurations

- 2 HI
- 4 HI
- 20 HI
- Tandem Mills

Materials Handled

Carbon Steel, Silicon Steel, Stainless Steel, Aluminum

Key Metrics

Operational Track Record

450 lines

Total Lines Installed

50 units

Installations in Last 5 Years
