

Metal Shaping Machine

This heavy-duty shaping machine is designed for precision metalworking operations. It features robust construction for stability and accurate shaping and cutting.

Product Overview

Professional Metal Shaping Capability

This heavy-duty shaping machine is engineered for high-precision metalworking operations in demanding manufacturing environments. Featuring a robust, vibration-resistant construction, it ensures exceptional stability for accurate contour shaping and fine surface finishing. With its powerful integrated motor and variable speed control, this machine offers the versatility required for tool rooms and professional machine shops.

Technical Specifications

Available Models	Z3050x16, Z3080x25
------------------	--------------------

Performance

Machining Capabilities

- Precision metal shaping
- Complex contour cutting
- Fine surface finishing

Control Type	Variable speed control
--------------	------------------------

Application

Target Environments

Tool Rooms • Machine Shops • Manufacturing Plants
