

Metal Shearing and Folding Machine

This machine is designed for metal forming applications, specifically shearing and folding. It is suitable for various metalworking tasks, providing precise cutting and bending capabilities.

Overview

Industrial Metal Processing Solution

This cutting and fold-bend machine is engineered for precision metal forming applications, including shearing and bending tasks. Featuring a robust construction, it ensures durability and stability during intensive industrial operations. The integrated control panel allows for accurate setting adjustments and performance monitoring, making it an ideal choice for workshops requiring efficient metal processing.

Technical Capabilities

Key Features

- Robust construction for durability
- High stability during operation
- Integrated control panel for precision
- Suitable for diverse metalworking tasks

Primary Functions

Shearing, Folding, Bending, Metal Forming

Applications

Ideal Environments

Workshops • Industrial Settings
