

Metal Shearing and Folding Machine

The metal shearing and folding machine is designed for precision cutting and folding of metal sheets. Its robust construction is suitable for demanding metal forming applications.

Overview

Robust Metal Forming Solution

This metal shearing and folding machine is engineered for high-performance metal forming applications. It features a robust design centered around a high-efficiency motor system, ensuring reliability during demanding operations. The machine incorporates advanced cooling and electrical components to maintain consistent performance and longevity in professional environments.

Motor Components

Motor Type	High-efficiency electrical motor
Winding Material	Copper
Cooling Mechanism	Integrated cooling fan
Commutator Type	Segmented copper cylinder

Performance Features

Key Features	Robust Construction, Heat Dissipation, High-Efficiency Motor, Industrial Grade
