

Metal Shearing and Folding Machine

This precision machine is designed for metal forming applications, specifically shearing and folding operations. It offers accurate cutting and bending capabilities suitable for various metalworking tasks.

Product Overview

Precision Metal Forming Solution

This metal shearing and folding machine is engineered for high-precision metal forming applications, combining robust cutting and bending capabilities in a single unit. Designed for industrial environments, its compact footprint allows for efficient integration into existing workflows while maintaining the durability required for heavy-duty tasks. It provides a reliable solution for various metalworking operations, ensuring accuracy and consistency in every fold and cut.

Technical Standards

Compliance Standard

VDE 0660

Model Identifier

E12 4203

Capabilities

Key Functions

Shearing, Folding, Bending, Metal Forming

Design Features

Build Quality

Industrial-grade robust construction
