

Metal Shearing and Folding Machine

This is a metal forming machine used for shearing and folding. It is designed for shaping and processing metal sheets or plates.

Overview

Industrial Metal Processing Solution

The Metal Shearing and Folding Machine is a robust industrial solution engineered for precision cutting and fold-bending operations. Designed for high-performance fabrication, this machine streamlines the shaping of metal sheets and plates. Its integrated control system and heavy-duty mechanical components ensure reliability and consistency in demanding manufacturing environments.

Technical Specifications

Equipment Category

Industrial Machinery • Metal Forming

Model Identifier

DK77100AZ

Primary Functions

Metal Shearing, Fold-Bending, Sheet Metal Fabrication
