

Metal Shearing and Folding Machine

This machine is designed for precision metal forming. It features robust construction and advanced features for efficient and accurate shearing and folding operations.

Overview

Precision Metal Processing

This high-performance cutting and fold-bend machine is expertly designed for precision metal forming in industrial environments. Engineered with robust construction, it ensures reliable and consistent performance for demanding shearing and bending operations. Its advanced features make it an ideal solution for workshops and factories requiring high efficiency and accuracy in metal fabrication.

Technical Specifications

Machine Type

Cutting • Folding • Bending

Series Models

J3G2-400A, J3G2-400B, J3G2-400C, J3G2-400E
