

Metal Shearing and Folding Machine

This robust machine is designed for metal forming applications. It is a type of shearing machine commonly used in metalworking industries.

Overview

Industrial Metal Forming Solution

This robust metal shearing and folding machine is engineered for high-performance metalworking applications. Designed for industrial environments, it features heavy-duty construction to ensure reliability during intensive forming tasks. The integrated precise blade system allows for accurate cutting and folding, making it an essential tool for metal fabrication workshops.

Technical Specifications

Build Quality

Heavy-duty • Industrial Grade

Machine Type

Shearing and Folding Machine

Primary Application

Metalworking, Metal Forming, Industrial Use

Performance Features

Core Capabilities

- High-precision blade system
- Combined shearing and folding functionality
- High-capacity cutting performance
- Reliable industrial operation
