

Metal Sheet Cutting and Bending Machine

This heavy-duty machine is designed for metal forming applications, specifically shearing and bending metal sheets. It features robust construction, precise controls, and a high-performance cutting and bending mechanism for industrial use.

Overview

Industrial Metal Forming Solution

This heavy-duty cutting and fold-bend machine is engineered specifically for high-precision metal forming applications. Designed for reliability in demanding manufacturing environments, it integrates both shearing and bending capabilities into a single robust unit. The machine ensures consistent performance for metal fabrication and construction tasks, offering professional-grade control for complex sheet metal work.

Technical Specifications

Suitable Industries

- Metal Fabrication
- Construction
- Industrial Manufacturing

Construction Type

Heavy-duty • Industrial Grade

Model ID

LG-60

Core Functions

Metal Shearing, Metal Bending, Sheet Forming
