

Metal Sheet Cutting and Folding Machine

This heavy-duty machine is designed for precision shearing and forming of metal sheets. It features a robust frame, hydraulic operation, and adjustable cutting parameters.

Overview

Industrial Metal Fabrication Solution

This heavy-duty metal cutting and fold-bending machine is engineered for the precise shearing and forming of metal sheets. Featuring a robust construction and hydraulic operation, it offers reliable performance for demanding industrial environments. With adjustable cutting parameters and integrated safety systems, it ensures both high-quality fabrication results and operator protection.

Key Metrics

Operation Method	Hydraulic
Primary Application	Metal Shearing, Metal Forming, Industrial Fabrication

Technical Features

Safety Equipment

- Operator protection shields
- Emergency stop functionality
- Robust frame construction

Control System	Integrated Control Panel
Adjustability	Yes
