

Metal Sheet Cutting and Folding Machine

This precision-engineered machine is designed for versatile metal forming. It features robust construction and tooling for accurate shearing and folding of various metal sheets.

Overview

Precision Metal Fabrication Solution

This precision-engineered cutting and fold-bend machine is designed for versatile metal forming applications, offering robust construction for durability and stability. It includes a comprehensive set of hardened steel cutting dies and bending tools, enabling precise shearing and folding of various metal sheets. The machine is ideal for manufacturing, prototyping, and metal fabrication workshops requiring the creation of complex shapes and profiles with high accuracy.

Technical Features

Core Capabilities

- Precision shearing
- Versatile metal folding
- Complex profile creation
- Hardened steel toolset

Construction

Robust Design • High Stability • Industrial Grade

Applications

Ideal Applications

Manufacturing, Prototyping, Metal Fabrication
