

Metal Sheet Cutting and Folding Machine

This machine combines cutting and bending functionalities for efficient sheet metal processing. It is equipped with multiple cutting heads and precise bending mechanisms, offering versatility and accuracy.

Overview

Precision Metal Fabrication

This precision cutting and fold-bend machine is expertly designed for versatile metal forming applications. By integrating both cutting and bending functionalities into a single unit, it enables highly efficient processing of sheet metal. Equipped with multiple cutting heads and advanced bending mechanisms, the machine ensures consistent accuracy and high-quality results for complex metal components.

Capabilities

Key Features

- Integrated cutting and bending systems
- Multiple cutting head configuration
- High-precision bending mechanism
- Designed for industrial manufacturing

Core Functions

Sheet Metal Cutting, Precision Bending, Metal Forming
