

Metal Sheet Cutting and Folding Machine

This machine is used for cutting and folding metal sheets. It is ideal for various sheet metal processing applications.

Overview

High-Performance Metal Processing

This industrial-grade machine is engineered for precision metal sheet cutting and folding operations. Designed to streamline fabrication workflows, it offers robust construction suitable for demanding workshop environments. Its dual-functionality ensures efficiency, making it an essential asset for metalworking professionals seeking reliable performance and versatile processing capabilities.

Technical Specifications

Application Suitability

Industrial Use • Workshop Fabrication

Machine Type	Combined Cutting and Folding System
Primary Functions	Metal Cutting, Metal Folding, Sheet Metal Fabrication
